Nenè round Table

design Paolo Vernier, 2013

Nenè round table with laquered metal base.

Top in melamine or HPL.

Available in two sizes: Ø70 cm and Ø80 cm.

Colors and Materials

Structure

White steel

Black steel

Sand steel

Brown steel

Grafite metal

Papaya orange steel

Light blue metal

Ocean blue steel

Bronze metal

Fango steel

Golden yellow metal

Pastel yellow steel

Ash grey metal

Light grey steel

Ocher steel

Facepowder pink metal

Red steel

Bulgaro red metal

Cherry red metal

Pine green steel

Sage green metal

Dark green metal

White pearl metal

Blue turquoise metal

Blue sapphire metal

Top

Melamine

4 Colors

White hpl black core

Black hpl

Dark green metal

The technologies used in the previous phase of powder coating play a fundamental role in the final result of the processing. They are in fact essential to increase adherence paint on the metal surface and then guarantee its duration over time. The metal frames, following a total cleaning of the surface, pass through chemical conversion processes, creating a compact base that allows for better adhesion of the subsequent treatment. In the last phase the object subjected to the powder coating process is placed in a polymerization oven, going to form an adherent and extremely tight layer durable. This particular paint job is ideal for outdoor use.

To clean the surface, use a damp microfiber cloth with neutral soap or specific metal cleaning products. Avoid hitting or rubbing the surface with sharp objects. Do not use scourers or other abrasive materials, since they would inevitably scratch the surface. Do not leave rusty iron objects on the surface for too long.

These surface treatments are not suitable for outdoor use, but they guarantee excellent resistance to frequent use, dirt and dust.

Materials Certifications

Laminate

Laminate tops are the result of the pressure of a large number of very thin sheets of paper impregnated with thermosetting resins. These tops are available in trendy colors and offer good performance in use.

CLEANING AND MAINTENANCE

For daily cleaning, we recommend using a microfiber cloth moistened with water or a solution of water and neutral soap, taking care to dry the top at the end. In case of stains, use a microfiber cloth with a specific detergent for laminates. Always wipe the surface with a dry cloth to avoid rings or stains.

Laminate tops must not be treated with scourers or products containing abrasive creams or powder detergents.

These tips are cleaning recommendations and do not guarantee complete stain removal. We recommend that you always test the cleaning method on a hidden part of the item to check the resistance of the color

Materials Certifications

Fenix laminate

Fenix is a unique material: opaque, with a silky hand and many properties for an intensive use. Fenix is made following a particular series of processes that involve multilayer coatings, the use of new generation acrylic resins, that are hardened and fixed through the Electron Beam Curing process. With a low light reflection, the surface of Fenix is extremely opaque, scratch-resistant, anti-fingerprint, pleasantly soft to the touch and easy to maintain. Among its strong points, there is also the thermal repairability, which

gives this material the capacity to regenerate from any superficial small scratch.

CLEANING AND MAINTENANCE

Fenix does not require special maintenance. For regular cleaning, we recommend using a microfiber cloth moistened with warm water or a mild detergent. Almost all regular household cleaning products are perfectly tolerated. For common stains, simply clean the surface with warm water, using a non-abrasive cloth. Persistent stains can be removed with non-abrasive household cleaners. After using cleaning products, it is recommended to rinse with hot water to remove any residue. In case of small scratches, it is possible to intervene with heat on the affected area: protect the top with a sheet of paper towel, and spray the sheet with water to make it moist. Then pass an iron set at medium-high heat with circular movements for about 30-40 seconds. Do not use steam. Remove the paper towel, and dry with a dry microfiber cloth.

These tips are cleaning recommendations and do not guarantee complete stain removal.

We recommend that you always test the cleaning method on a hidden part of the item to check the resistance of the color.

Colour samples are to be considered approximate for each product. Slight color differences between a lot and the other are to be considered normal.
