

MIDJ

Charlotte floor

Direct light floor lamp. The lamp is made with a metal base and structure to which two adjustable lampshades are anchored. The lamp is available in the single black variant. The collection is inspired by the Bauhaus current, proposes geometries simplified to the maximum, almost abstract, easily legible with respect to space.

On the electric power cable there is the on / off foot switch. The cable has a length of 2 m and is covered in black silk.

The lamp is part of the **Charlotte collection**

Dark green metal

The technologies used in the previous phase of powder coating play a fundamental role in the final result of the processing. They are in fact essential to increase adherence paint on the metal surface and then guarantee its duration over time. The metal frames, following a total cleaning of the surface, pass through chemical conversion processes, creating a compact base that allows for better adhesion of the subsequent treatment. In the last phase the object subjected to the powder coating process is placed in a polymerization oven, going to form an adherent and extremely tight layer durable. This particular paint job is ideal for outdoor use.

To clean the surface, use a damp microfiber cloth with neutral soap or specific metal cleaning products. Avoid hitting or rubbing the surface with sharp objects. Do not use scourers or other abrasive materials, since they would inevitably scratch the surface. Do not leave rusty iron objects on the surface for too long.

These surface treatments are not suitable for outdoor use, but they guarantee excellent resistance to frequent use, dirt and dust.
