Chaise **Master S M LG**

design Paolo Vernier, 2017

Chaise Master avec piètement à quatre pieds en acier laqué, or rosé ou nickel noir.

Assise et dossier en bois ou Fenix.

Couleurs et matériaux

Structure

Metal blanc

Metal noir

Metal corde

Métal marron

Métal graphite

Métal fango

Métal bronze

Métal jaune pastel

Métal ocre

Métal rosso

Métal vert sauge

Métal bleu ocean

Métal gris claire

Métal rose poudre

Or rosé

Noir nickel

Bonze doré

Métal orange papaya

Métal bleu ciel

Acier blanc perle

Acier bleu turquoise

Acier bleu saphir

Métal jaune doré

Métal gris cendre

Métal rouge bulgare

Métal rouge cerise

Métal vert pin

Metal vert foncé

Revêtement

Plaqué de frêne laqué

10 Couleurs

Plaqué noyer flammé

Fenix blanc

Fenix noir

Acier blanc perle

The technologies used in the previous phase of powder coating play a fundamental role in the final result of the processing. They are in fact essential to increase adherence paint on the metal surface and then guarantee its duration over time. The metal frames, following a total cleaning of the surface, pass through chemical conversion processes, creating a compact base that allows for better adhesion of the subsequent treatment. In the last phase the object subjected to the powder coating process is placed in a polymerization oven, going to form an adherent and extremely tight layer durable. This particular paint job is ideal for outdoor use.

To clean the surface, use a damp microfiber cloth with neutral soap or specific metal cleaning products. Avoid hitting or rubbing the surface with sharp objects. Do not use scourers or other abrasive materials, since they would inevitably scratch the surface. Do not leave rusty iron objects on the surface for too long.

These surface treatments are not suitable for outdoor use, but they guarantee excellent resistance to frequent use, dirt and dust.

Plaqué de frêne laqué

Veneered woods are the result of a process of gluing extremely thin sheets of wood applied to various types of supports to produce furnishing elements, which have a similar appearance to solid wood, but with better performance in terms of resistance to woodworms, lightness and greater stability over time. If exposed to light, and in any case with the passage of time, the color of the veneer changes. It may happen that furniture of the same color purchased after some time, show color differences. Upon request, the veneered parts can be supplied with certified origin from forests managed in a correct and responsible manner, according to the rigorous environmental standards established by the FSC circuit.

CLEANING AND MAINTENANCE

For ordinary cleaning of veneered woods, use a cloth moistened with neutral soap well diluted in water or specific products. Always dry after each application with a dry cloth or paper towel. Do not use abrasive products. In case of accidental spills of substances or liquids, immediately dab the wood with paper towel or with a dry and clean cloth. Avoid proximity to heat sources. Evenly expose the veneered woods to light, for example by periodically opening the table extensions that are stored inside the structure, or by moving any object placed on the surface, such as vases and accessories.

These tips are cleaning recommendations and do not guarantee complete stain removal.

We recommend that you always test the cleaning method on a hidden part of the item to check the

resistance of the color.

Colour samples are to be considered approximate for each product. Slight color differences between a lot and the other are to be considered normal.
