

MIDJ

Table bistro **Trampoliere** **H107**

design Roberto Paoli, 2013

Table avec piètement à 3 branches en acier laqué ou chromé.

La version à structure laquée peut être utilisée à extérieur.

Dimension maximale du plateau 80x80 cm (31.5x31.5 in) ou ø90 cm (35.4 in)

Couleurs et matériaux

Structure

Chromé

Metal blanc

Métal rosso

Metal corde

Métal marron

Métal graphite

Metal noir

Métal rose poudre

Métal fango

Métal bronze

Métal jaune pastel

Métal ocre

Métal vert sauge

Métal bleu ciel

Métal bleu ocean

Métal orange papaya

Acier blanc perle

Acier bleu turquoise

Acier bleu saphir

Métal jaune doré

Métal gris cendre

Métal gris claire

Métal rouge bulgare

Métal rouge cerise

Métal vert pin

Metal vert foncé

Plateau

Melamine
4 Couleurs

Verre transparent

Verre brillant extra-blanc

Hpl blanc bord noir

Hpl noir

Hpl grigio cemento

Hpl corten

Hpl blanc bord blanc

Dimensions

Acier blanc perle

The technologies used in the previous phase of powder coating play a fundamental role in the final result of the processing. They are in fact essential to increase adherence paint on the metal surface and then guarantee its duration over time. The metal frames, following a total cleaning of the surface, pass through chemical conversion processes, creating a compact base that allows for better adhesion of the subsequent treatment. In the last phase the object subjected to the powder coating process is placed in a polymerization oven, going to form an adherent and extremely tight layer durable. This particular paint job is ideal for outdoor use.

To clean the surface, use a damp microfiber cloth with neutral soap or specific metal cleaning products. Avoid hitting or rubbing the surface with sharp objects. Do not use scourers or other abrasive materials, since they would inevitably scratch the surface. Do not leave rusty iron objects on the surface for too long.

These surface treatments are not suitable for outdoor use, but they guarantee excellent resistance to frequent use, dirt and dust.

Verre transparent

Tempered glass tops are elegant and shiny. The interaction with the surrounding light enhances their brilliance and increases their timeless charm.

Tempered glass is glass that has been subjected to a special treatment that involves gradual heating, followed by sudden air cooling. This procedure allows the transformation into a more resistant and safer glass, as, in case of breakage, it will shatter into small harmless fragments. Tops in tempered glass may have slight scratches due to sliding on the oven rollers. In addition, any dots and rings on the surface, visible in light or backlight conditions, prove that the tempera process has been carried out.

CLEANING AND MAINTENANCE

Glass tops do not require any particular maintenance, and cleaning is simple and effective. In general, for daily cleaning, use a specific microfiber cloth moistened with hot water or detergents formulated for glass

surfaces. For stubborn stains, use non-abrasive cleaning products or detergents. To remove any dried residues deposited on the surface, proceed with the use of a wooden or plastic scraper. Do not use rough or abrasive sponges. For all tops we recommend avoiding direct contact with sharp or pointed tools, as well as avoid placing very cold or very hot containers directly on the glass tops. These tips are cleaning recommendations and do not guarantee complete stain removal. We recommend that you always test the cleaning method on a hidden part of the item to check the resistance of the material.

Colour samples are to be considered approximate for each product. Slight color differences between a lot and the other are to be considered normal.
