

MIDJ

Charlotte sol

Lampadaire à lumière directe. La lampe est composée d'une base et d'une structure en métal sur lesquelles sont ancrés deux abat-jour réglables. La lampe est disponible dans la variante noire unique. La collection s'inspire du courant Bauhaus, propose des géométries simplifiées au maximum, presque abstraites, facilement lisibles par rapport à l'espace.

Sur le câble d'alimentation électrique, il y a l'interrupteur au pied on/off. Le câble a une longueur de 2 m et est recouvert de soie noire.

The technologies used in the previous phase of powder coating play a fundamental role in the final result of the processing. They are in fact essential to increase adherence paint on the metal surface and then guarantee its duration over time. The metal frames, following a total cleaning of the surface, pass through chemical conversion processes, creating a compact base that allows for better adhesion of the subsequent treatment. In the last phase the object subjected to the powder coating process is placed in a polymerization oven, going to form an adherent and extremely tight layer durable. This particular paint job is ideal for outdoor use.

To clean the surface, use a damp microfiber cloth with neutral soap or specific metal cleaning products. Avoid hitting or rubbing the surface with sharp objects. Do not use scourers or other abrasive materials, since they would inevitably scratch the surface. Do not leave rusty iron objects on the surface for too long.

These surface treatments are not suitable for outdoor use, but they guarantee excellent resistance to frequent use, dirt and dust.
